# Tempest Jet-Wash

Working Water has launched the Tempest high quality, low-cost jet-wash, vacuum and air-water range.

The range, manufactured in Loughborough is designed to offer a high performance and innovative yet economic and reliable alternative to existing products.

The Tempest jet-wash has been specifically designed to give an industry leading performance from its foaming system. Its unique design injects air into the chemical system to deliver a thick, rich foam for single or triple coloured foams through the brush, and hot shampoo and wheel cleaner from the lance. The results are sure to drive revenues and customer satisfaction.

An on demand heating system significantly reduces electricity costs through the use of 3kW or 6kW heating elements, with an innovative reduced flow to ensure capacity keeps up with demand. Options available for both sound and heat insulation.

An innovative removable and lockable stainless steel external safe draw makes it clear to would-be thieves that there is no safe inside the cabinet. The system also makes it easy and secure for staff to empty the tokens or cash at the end of the day.

The family is completed with complementary, cabinet designed, vacuum and air/water tower units. The entire range is available through a variety of finance options including purchase, lease, and rental and profit share.
