Water Recycling and Rain Water Harvesting Specialists

Reclaim Settlement Tanks

Working Water has a range of settlement tanks suitable for most vehicle wash applications manufactured in GRP or stainless steel. These materials along with the structural baffles ensure a long, corrosion free life.

The tanks are usually installed below ground but above ground tanks are also available.

These tanks are the essential, first step treatment for any water recycling system. They also reduce drain blockage and pollution discharge to foul drain.

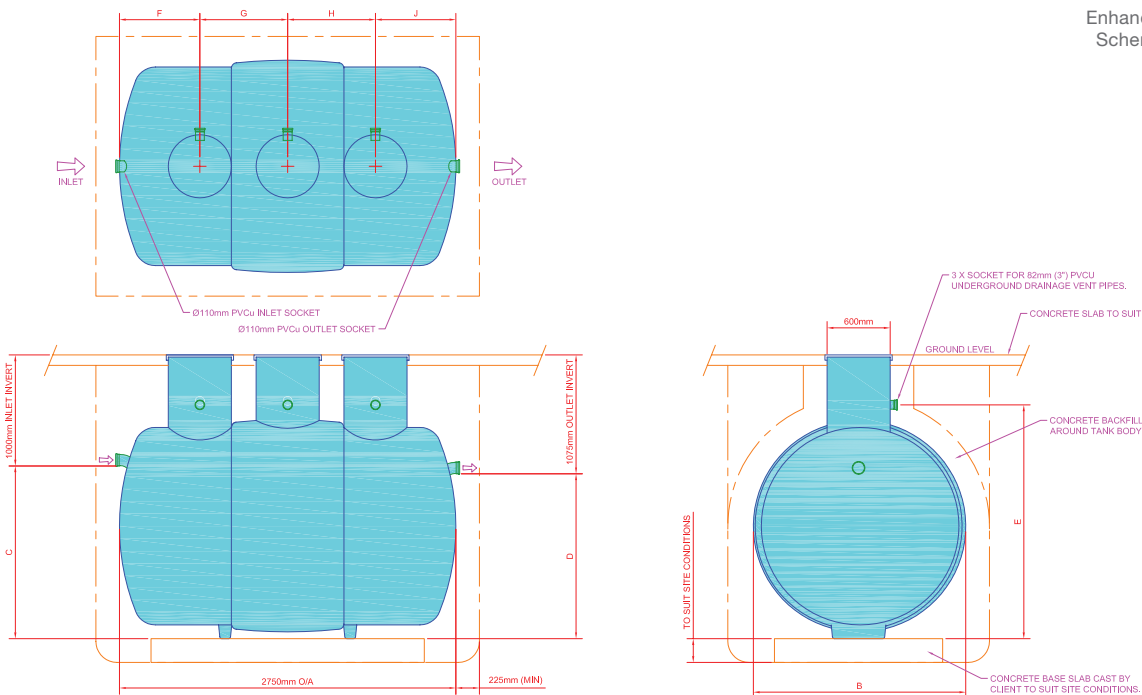

All tanks come with pedestrian duty lids as standard with 40 tonne duty lids available as an option.

These tanks can be installed during the wash bay formation. If the associated reclaim pipework and drainage is also installed, a water reclaim system can then be added at any time with minimum disruption.

This product is on the Enhanced Capital Allowance (ECA) Scheme's Water Technology List
